Rosalind
Given a DNA string count the number of each nucleotide and return the count for each.
require '../dna'

dna = DNA.from_file("dna.txt")
bases = dna.base_pair_hist
puts "#{bases['A']} #{bases['C']} #{bases['G']} #{bases['T']}"
its sum.

21

The sum of its nth term as n \rightarrow \infty.

Actually I don't know
to do this

\[ \frac{8}{512} = \frac{q}{16} = \frac{1}{8} \]

States the statement or answers the question.

Welcome aboard
You’re riding Ruby on Rails!

About your application’s environment

Getting started
Here’s how to get rolling:

1. Use rails generate to create your models and controllers
   To see all available options, run it without parameters.

2. Set up a default route and remove
   public/index.html
   Routes are set up in config/routes.rb.

3. Create your database
   Run rake db:create to create your database. If you're not
   using SQLite (the default), edit config/database.yml with
   your username and password.
